

# A4 Vision

Application for Vision

## VISION SDK

The Vision™ Software Development Kit (SDK) enables application development for configuration, network monitoring, deployment and integration of A4Vision's security solutions. Using the Vision SDK you can quickly and easily integrate into existing physical access and network security solutions for centralized physical and logical security maintenance and management.

The Vision SDK can be used to seamlessly integrate into a wide-range of third party applications as well as new application development. Examples of integration and development capabilities include time and attendance applications, monitoring and surveillance solutions, site security systems, as well as existing physical access technology, including custom embedded hardware, firmware, and software applications.

### Advanced Access Control & Monitoring

- Business Premises
- Enterprise Security Systems
- Time and Attendance Systems
- Auditing and Maintenance

### Identity Establishment

- Hospitals and Lab Facilities
- Airport Passenger Boarding Control
- ATM and Banking Clients
- DMV, INS, and other government-related organizations

### Forensic Applications

- Criminal identification, verification, tracking, and monitoring
